

Bringing it all together

One AV solutions

Custom conferencing environments

A complete conferencing solution can greatly enhance your communications abilities. However, integrating the solution into your current environment can be challenging. That's why you need a partner who can seamlessly and expertly manage the project, allowing you to remain focused on your core business.

BT Conferencing has the experience to be that partner. With our expertise, we custom design, build and implement One AV projects quickly and professionally. Our engineers can craft a custom conferencing solution, which can include elements such as video codecs, ceiling/tabletop microphones, plasma screens, DVD/VHS, projectors, cameras and more.

One AV - the right solution for your needs

BT Conferencing takes a comprehensive, end-to-end view of your video conferencing solution. We take into consideration how your solution will be maintained once it's in place, and we work with you to map a support solution that meets your specific requirements.

The underlying advantage is that this allows you to remain focused on your business while BT Conferencing takes care of planning and installing your video conferencing solution. Once the solution is in place, you'll be able to concentrate on the content of your meetings while we manage the technology.

Complete monitoring and maintenance in one comprehensive package

Ensuring continuous operation of your video conferencing endpoint alleviates lost productivity that results from system downtime. We make it easy to manage your system with end-to-end support for your One AV solution, including BT Conferencing's Remote Equipment Monitoring (REM) on the endpoint. Our support solutions are driven by an experienced help desk and field support infrastructure with more than twenty years of experience in the conferencing industry. If any aspect of your solution goes down, BT Conferencing will work directly with you to determine the specific issue and recommend a support solution to bring the affected component online as soon as possible.

One AV solutions from BT Conferencing provide easy-to-use, reliable and cost-effective conferencing solutions, including:

- Professionally engineered room solutions
- Centralized control systems combining presentation and interactive technology
- Complete end-to-end management of your project
- Approved professional products and project management
- Fast professional installation
- BT Conferencing Help Desk, maintenance and monitoring services available
