In partnership with Dolby®, BT is launching an enhanced audio conferencing service – BT MeetMe with Dolby Voice, that will deliver more natural and effective audio meetings.

**Sounds and feels like in-person meetings**

With BT MeetMe with Dolby Voice, meeting attendees truly feel as if they’re in the same room. Participants are more able to engage naturally and interact in a dynamic conversation. In addition to the existing BT MeetMe capability this service delivers:

- **High quality sound**: background noise reduction combined with high definition quality.
- **Voice separation**: sounds come from different directions (just like being around a meeting room table).

**More natural, more effective**

These unique features mean audio meetings are more inclusive, easier to participate in and to manage. With this new service it is easier to:

- Understand who is talking – so more time can be focused on what is being said.
- Identify when people are trying to join in with the conversation – so everyone can participate more easily.
- Understand what is said if more than one person talks at the same time.

“The stereo [voice separation] solution is great, much better than normal calls.”

“The overall experience of the audio call was excellent. A+.”

- Trial user feedback
Calls are less tiring and more interactive, making the service ideal for:

• Workshops / brainstorming sessions where active participation by all (and not just listening) is required.
• Executive meetings where you need a fully engaged audience making the right decisions.
• Project management with a broad range of individuals working together coming at the problem from very different perspectives.
• Global teams when English may not be everyone’s first language and accents can confuse.

How it works

• To enable high quality sound and voice separation users access their meeting via PC/MAC or smart mobile device to connect via the internet (IP).
• The voice separation effect is enabled through use of a stereo headset (any will do).
• In-call management features give you full control over your meeting.
• Joining through an access telephone number (instead of IP) delivers the traditional audio conferencing experience.

Delivering for your business

Replace even more face to face meetings

• Replaces face to face meetings with audio, saving time and money.
• Makes existing audio conferences more productive, reducing the need for multiple follow ups or delays.

Lower access costs

• Reduces access costs with IP connection replacing carrier toll and conferencing toll free charges at home and abroad.

Global secure access

• Can be accessed anywhere with internet access. Communication is encrypted.

Why BT Conferencing?

With over 25 years of experience, BT Conferencing is one of the leading suppliers of conferencing services in the world; building, delivering and managing solutions for customers, with a focus on helping them collaborate better internally and externally. Alongside the most advanced technology we offer tools to help you get the best from your service, with simple applications to help you launch, manage and schedule conferences from smartphones or desktops at the touch of the button. That’s all backed up with training that makes the service easy to use for end-users, and increases the adoption rate within your organization, adding value to your investment. This proven formula helps us provide our 47,000 customers with better business outcomes, every day.
